PROFESSIONAL SUMMARY

Full-Stack Software Engineer with hands-on experience designing, developing, and deploying scalable web applications using React, Node.js, Express, Flask, and SQL/NoSQL databases. Strong foundation in RESTful API development, authentication (JWT), relational database design, and full application deployment. Known for analytical problem-solving, clean code practices, and high attention to detail developed through a prior healthcare science career. Seeking entry-level Software Engineer, Full-Stack, Frontend, or Backend roles in remote or hybrid environments.

TECHNICAL SKILLS

Frontend: React.js, JavaScript (ES6+), HTML5, CSS3, DOM Manipulation

Backend: Node.js, Express.js, Flask, REST APIs, Authentication (JWT)

Databases: PostgreSQL, MySQL, MongoDB, SQLAlchemy

Tools & Deployment: Git, GitHub, Render, Supabase, Environment Variables

Core Concepts: Object-Oriented Programming, MVC Architecture, API Integration, Testing & Debugging

SELECTED PROJECTS

Virtual Travel Planner | React, Node.js, Express, MongoDB

- Engineered a full-stack travel planning platform with secure user authentication and protected routes.
- Built RESTful APIs and integrated third-party travel APIs for real-time data retrieval.
- Designed responsive UI components and optimized backend data handling for performance and scalability.
- Deployed production-ready application with environment configuration and database hosting.

Jobly – Job Application Platform | React, Express, PostgreSQL

- Developed a secure job search and application system with JWT-based authentication.
- Implemented dynamic data fetching, profile management, and protected client-side routing.
- Structured relational database models and deployed full-stack application via Render and Supabase.

Warbler (Twitter Clone) | Flask, SQLAlchemy, PostgreSQL

- Enhanced a social media platform by implementing likes, authentication, and profile updates.
- Optimized SQL queries and improved backend performance.
- Wrote comprehensive unit and integration tests to ensure application reliability.

PROFESSIONAL EXPERIENCE

Software Engineering Fellow – University of Massachusetts (2024–2025)

- Built full-stack web applications using modern JavaScript and Python frameworks.
- Designed modular backend systems following MVC principles and best practices.
- Strengthened debugging, database optimization, and deployment workflows.

Clinical Laboratory Scientist – Baystate Medical Center (2015–2021)

- Performed high-precision analytical testing in fast-paced clinical environments.
- Maintained strict quality control standards and managed complex data systems.
- Developed strong analytical thinking, documentation accuracy, and problem-solving skills.

EDUCATION

University of Massachusetts – Software Engineering Bootcamp (2024–2025)

Springfield Technical Community College – A.S., Medical Laboratory Science

BBIT Gujarat, India – A.S., Information Technology
